GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Bacobedo, Jaime
APPLICANT: Escobedo, Jaime
APPLICANT: Escobedo, Jaime
TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
FILE REFERENCE: MBHBOO, 976-J (237/198)
CURRENT APPLICATION NUMBER: US 60/005,974
PRIOR APPLICATION NUMBER: US 60/005,974
PRIOR APPLICATION NUMBER: US 60/005,974
PRIOR PILING DATE: 1995-10-26
NUMBER OF SEQ ID NOS: 14225
SOFTWARE: PatentIn version 3.0
SEQ ID NO 2597
LENGTH. 177
                                                                                                                                                               APPLICANT: Pavco, Pam
APPLICANT: McSwiggen, Jim
APPLICANT: McSwiggen, Jim
APPLICANT: Stinchcomb, Dam

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 387, Application US/09827998

Sequence 387, Application US/09827998

Patent No. 6656700

GENERAL INFORMATION:

APPLICANT: GL, Yizhong

APPLICANT: GL, Yizhong

APPLICANT: Shannon, Mark

TITLE OF INVENTION: NOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E

FILE REPRENCE: MDMORF-8

CURRENT APPLICATION NUMBER: US/09/827,998

CURRENT FILING DATE: 2001-04-06

PRIOR FILING DATE: 2000-05-26

PRIOR FILING DATE: 2000-05-26

PRIOR FILING DATE: 2000-09-27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Sequence 3, Application US/09658859;
Patent No. 6703200
GENERAL INFORMATION:
APPLICANT: Hamer, John
TITLE OF INVENTION: METHODS AND MATERIALS FOR THE RAPID AND
TITLE OF INVENTION: HIGH VOLUME PRODUCTION OF A GENE KNOCK-OUT LIBRARY IN AN
TITLE OF INVENTION: HIGH VOLUME PRODUCTION OF A GENE KNOCK-OUT LIBRARY IN AN
TITLE OF INVENTION: HIGH VOLUME PRODUCTION OF A GENE KNOCK-OUT LIBRARY IN AN
FILE REPERENCE: 2004 CIP
CURRENT APPLICATION NUMBER: US/09/658,859
CURRENT FILING DATE: 2000-09-11
CURRENT PRICATION NUMBER: 09/270,620
PRIOR FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 3
SOFTWARE: FEASESEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                          APPLICANT: CHEN, WENBRIELY

Patent No. 6037176

BABERRAL INFORMATION:
APPLICANT: Frank Bennett
APPLICANT: Brack P. Monia
APPLICANT: Lex M. Cowsert
TITLE OF INVENTION: ANTIENSE MODULATION OF integrin beta 3 EXPRESSION
FILE REFERENCE: RTS-0070
CURRENT APPLICATION NUMBER: US/09/344,520
CURRENT FILING DATE: 1999-06-25
NUMBER OF SEQ ID NOS: 47
LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 33, Application US/0933993A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 5, Application US/09085759;
Patent No. 6096722;
GENERAL INFORMATION:
APPLICANT: C. Frank Bennett, Christopher Mirabelli,
APPLICANT: Brenda Baker
TITLE OF INVENTION: Antisense Modulation of Cell Adhes;
TITLE OF INVENTION: Molecule Expression and Treatment;
TITLE OF INVENTION: Molecule-Associated Diseases
NUMBER OF SEQUENCES: 109
CORRESPONDENCE ADDRESS:
ADDRESSEE: Law Offices of Jame Massey Licata;
STREET: GE East Main Street;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COUNTRY: USA
